About Us

Star Water Technology has moved to plastic injection moulding industry in 2003. In 2005, with the support of our parent company GEMAŞ GENEL MÜHENDİSLİK AŞ, company started to produce UPVC Pipe Fittings and Valves.

The following main factors play an important role in the selection of producing UPVC products;

- High strength and quality of UPVC raw material compared to other plastics
- In the global plastics industry, the number of companies that produce the same product group is relatively small compared to other plastic types
- Intensive use of UPVC high pressure fittings and valves in key sectors such as construction, agricultural irrigation and general plumbing

Our Izmir based company continues its activities with its internationally registered FITVALF brand which it has created and with its ever expanding product range.

Our company continues to grow rapidly in domestic and foreign markets with more than 200 employees, 6000 m² production, warehousing and office areas.

FITVALF, which certifies all production with ISO 9001-2000 Quality Management System, proved its high quality and innovative product concept with its patented ball valves. Our brand continues to receive ever-increasing shares in world markets with this innovative approach.

Technical Information

UPVC

UPVC (unplasticized polyvinylchloride) pipes and fittings exhibit excellent resistance to aggressive environments both naturally occurring and as a result of industrial activity. They are resistant to almost all types of corrosion, either chemical or electrochemical in nature. Since UPVC is a non-conductor, galvanic and electro chemical effects do not occur in UPVC pipes.

UPVC Pipes and fittings are often used in the following circumstances:

- For drinking water pipe distribution systems, both main and supply lines
- Sewer and discharge pipe systems

Due to its non-metallic nature, the material used is totally resistant to all forms of metallic corrosion. Aggressive water resulting from high sulphate soils and low hardness water will not attack UPVC pipes. Our pipes are therefore resistant to a wide range of industrial waters and chemicals and offer an advantage in long-term systems life and manufacture costs.

For more information on the resistance of UPVC for specific chemical(s), see page 12.

We inform you of the suitable pipe solution necessary. Being made of a tasteless and odorless material, UPVC pipes remain neutral to all transported fluids. UPVC is completely inert and is widely used for transporting liquids made for human consumption.

Because of their mirror-smooth inside surface, UPVC pipes have minimum flow head loss. There is also no buildup of inside deposits, a particular advantage in the construction of sewerage systems.

The physical properties of UPVC pipes are not affected by neither direct sunshine, nor wind or rain. However, to avoid surface browning due to long exposure to direct sunlight, it is recommended that the pipes are kept protected from direct sunlight. Rigid PVC is not conductive to combustion. In the event of a fire, flames are unable to travel on UPVC pipes. They therefore offer added safety when used for electrical installations, both domestic and industrial.

UPVC pipes are relatively light. Their specific weight 1.43 is one-fifth that of steel pipes. This cuts down transportation costs and facilitates installation when in difficult and remote places. Installation is quick and easy with a complete line of fittings either with the solvent glue weld sockets or the rubber seal socket joints. In either case, a leak-proof joint is assured. Subsequent maintenance work is also carried out with a minimum of complication and cost.

UPVC Pipes and Fittings Dimensions

The pipe industry maintains two different ways to refer to the dimension of a pipe.

One is the Nominal Dimension of the DN size.

This is commonly used for steel and iron pipes.

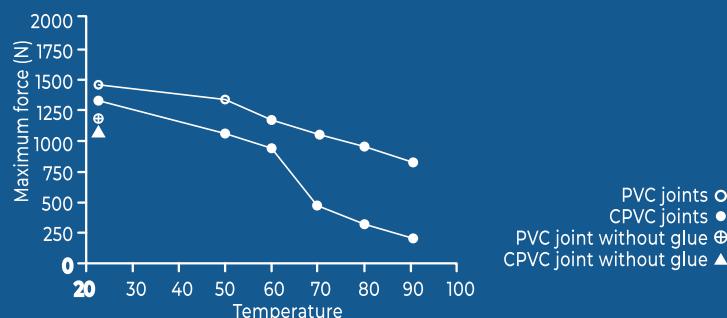

The plastic industry commonly uses the Outside Diameter or OD size.

Diameter Nominal DN (mm)	Nominal Pipe Size NPS (inches)	Outside Diameter OD (mm)
6	1/8	10
8	1/4	12
10	3/8	16
15	1/2	20
20	3/4	25
25	1	32
32	1 1/4	40
40	1 1/2	50
50	2	63
65	2 1/2	75
80	3	90
100	4	110
125		125
125		140 DIN
150	6	160
150		180 GAS
200	8	200
200		225 DIN
250	10	250
250		280 DIN
300	12	315
350	14	355
400	16	400
450	18	450 DIN
500	20	500
500		560 DIN
600	24	630
700	28	710
800	32	800
900	36	900
1000	40	1000
1100	44	1200
1200	48	1200
1400	56	1400
1600	64	1600
2000	80	2000

General Properties of UPVC at 20 °C

Test	Unit	Value	Remark
Specify Gravity	-	1.42 - 1.43	Usually 1,43
Shore Hardness	Deg.	70 - 90	Equivalent to the hardness of Aluminum Varies with temperature
Tensile Strength	Kg/cm	500	
Bendling Strength	Kg/cm	950	Varies with temperature
Modulus of Elasticity	Kg/cm	3.2 x 10	
Impact Strength Izod	Jaules	4.7 - 5,4	
Water Absorption	Mg/cm	1,05	
Elongation at Break	-	>80%	
Softening Point (V.S.P) 5 KG	°C	80	
Fabricating Temperature	°C	110-140	
Co-efficient of Linear Expansion at 70°C	Mm/m°C	0.08	
Specific Heat	Kcal/Kg°C	0.025	
Heat Reversion	-	< 2,5%	
Specific Volume Resistivity	Ohm/cm	> 3-5 x 10	UPVC is non-conductor of electricity and is not subject to galvanic or electrolytic attack
Dielectric Strength	KV/mm	>40	Electrical equipment must not be earthed to uPVC pipes

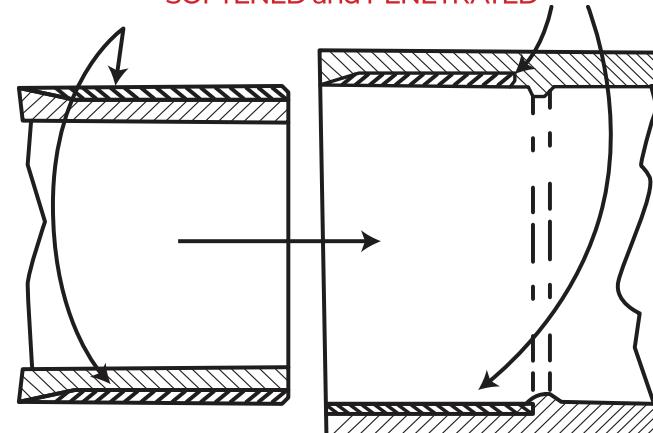

Relationship between tensile strength and temperature

Solvent Welding Guide

To make consistently good joints, the following points should be clearly understood.

1. The joining surfaces must be softened and made semifluid.
2. Sufficient cement must be applied to fill gap between pipe and fitting.
3. Assembly of pipe and fittings must be made while the surfaces are still wet and cement is still fluid.
4. Joint strength develops as the cement dries. In the tight part of the joint, the surfaces will tend to fuse together; in the loose part, the cement will bond to both surfaces.

THESE AREAS MUST BE SOFTENED and PENETRATED

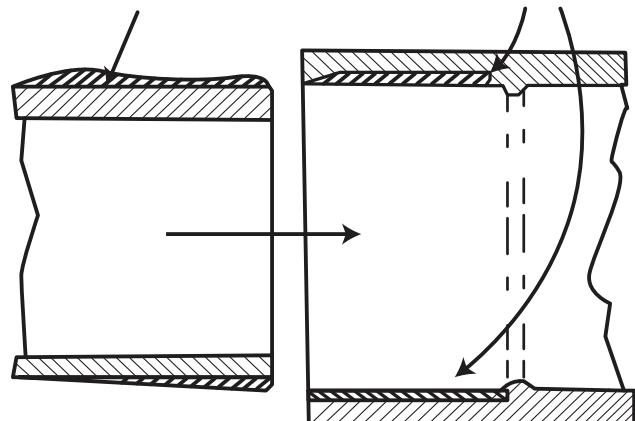

Penetration and softening can be achieved by the cement itself, by using a suitable primer or by the use of both primer and cement. For certain materials and in certain situations, it is necessary to use a primer. A suitable primer will usually penetrate and soften the surfaces more quickly than cement alone. Additionally, the use of a primer can provide a safety factor for the installer, for he can know under various temperature conditions when sufficient softening has been achieved. For example, in cold weather more time and additional applications may be required.

Sufficient cement to fill the loose part of the joint must be applied. Besides filling the gap adequate cement layers will penetrate the surfaces and also remain wet until the joint is assembled. Prove this for yourself. Apply on the top surface of a piece of pipe two separate layers of cement.

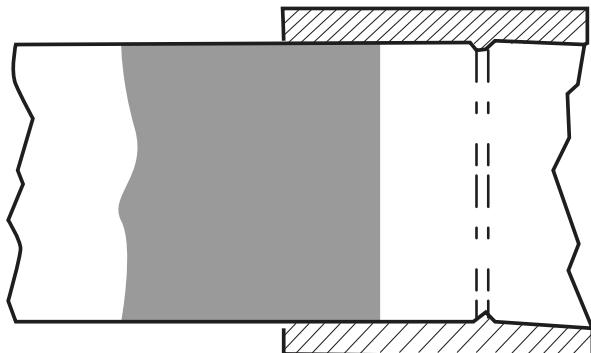

First apply a heavy layer of cement; then alongside it, apply a thin brushed out layer. Test the layers every 15 seconds or so by a gentle tap with your finger. You will note that the thin layer becomes tacky and then dries quickly (probably within 15 seconds); the heavy layer will remain wet much longer. A few minutes after applying these layers check for penetration. Scrape the surface of both with a knife. The thin layer will have achieved little or no penetration; the heavy one will have achieved much more penetration. If the cement coatings on the pipe and fittings are wet and fluid when assembly takes place, they will tend to flow together and become one cement layer.

Also, if the cement is wet, the surfaces beneath them will still be soft and these softened surfaces in the tight part of the joint will tend to fuse together. As the solvent dissipates, the cement layer and the softened surfaces will harden with a corresponding increase in joint strength. A good joint will take the required working pressure long before the joint is fully dry and final joint strength is obtained. In the tight(fused) part of the joint, strength will develop more quickly than in the looser(bonded) part of the joint.

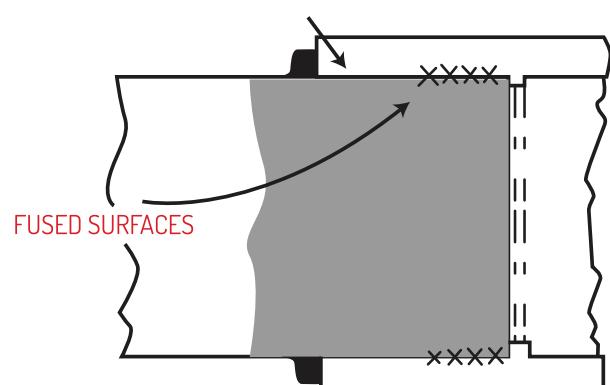

CEMENT COATINGS OF SUFFICIENT THICKNESS

SURFACES MUST BE ASSEMBLED WHILE THEY ARE WET AND SOFT

BONDED SURFACES

Technical Information

Solvent Weld jointing of large diameter pipes require special care and our Technical Service Department should be contacted in case of difficulty. Always replace the lid of the can after making a joint and follow the instructions on the can observing any warnings.

Joints should not be moved or disturbed for 10-15 minutes then the jointed pipe may be handled with care. Allow 4 hours if the jointed pipe lengths are to be laid in a trench.

Allow 8 hours to elapse before applying working pressures or 24 hours for test pressures. With pipe sizes up to 50mm, it is possible to reduce this time. Allow 1 hour for each 3.5 atmospheres of pressure. Brushes must be clean and dry before commencing solvent welding. Brushes must be thoroughly cleaned after use by washing in cleaning fluid. Do not dilute solvent adhesive with cleaning fluid. Use Solvent adhesive and cleaning fluid in a well-ventilated area. Keep away from naked flames and do not smoke. Always replace lids of containers. In any event, attention is drawn to the instructions printed on the containers.

When laying continuous runs of pipe, joints may be made quicker than the setting times advised above. The joint will not be disturbed with long lengths, providing that the pipe is not twisted or the previously made joint lifted out of place.

I Rubber Ring Joints

Ensure that the spigot and socket are free from dust, grit, grease and as dry as possible. Insert pipe into the socket without seal ring in place and mark pipe when it is fully inserted. Place seal in groove of socket ensuring that seal is correct way round. Angled seal rings should be fitted with tapered section facing the outside of the socket.

Apply jointing lubricant to the chamfer and the end of the spigot of the pipe or fitting only. Push the pipe firmly into the socket up to the insertion mark previously made. If an expansion gap is required the pipe is then pulled back by the desired amount.

I Storage and Handling

Unplasticized UPVC pipes are strong yet light, their specific gravity being approximately one-fifth of Cast Iron. As a result, these pipes are more easily handled than their metal counterparts. Reasonable care, however, should be used at all times. Since the soundness of any joint depends on the condition of the spigot and the socket, special care must be taken in transit, handling and storage to avoid damage to the ends.

When loading pipes on to vehicles, care must be taken to avoid their coming into contact with any sharp corners such as cope irons, loose nail-heads, etc., as pipes may be damaged by being rubbed against these during transit.

Whilst in transit, pipes shall be well secured over their entire length and not allowed to project unsecured over the tailboard of the lorry.

When off-loading, pipes should be lowered, not dropped to the ground. Pipes may be off-loaded from lorries by rolling them gently down timbers, care being taken to ensure that pipes do not fall one upon another, nor on to any hard or uneven surfaces.

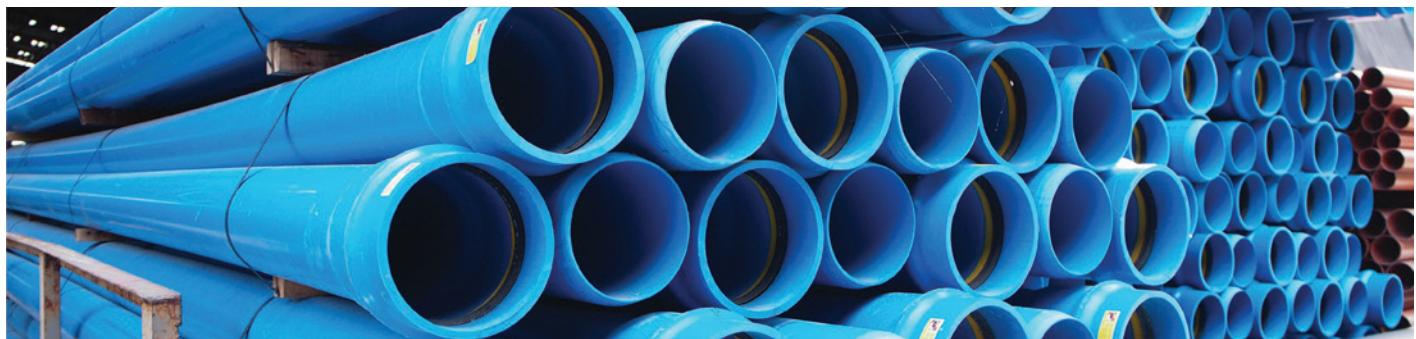

Pipe Transport

Pipe Loading

Pipes should be given adequate support at all times. Pipes should not be stacked in large piles, especially in warm temperature conditions, as the lower layers may distort, resulting in difficulties in jointing and pipe alignment. Any pipe with ends prepared for jointing (Socket and spigot joints, 'A' joints, etc.) should be stacked in layers with sockets placed at alternate ends of the stack and with the sockets protruding to avoid unstable stacks and the possibility of imparting a permanent set to the pipes.

Pipe Stocking

For long-term storage, pipe racks should provide continuous support.

For pipe sizes 160mm and above timber of at least 3in. (75mm) bearing width at spacing's not greater than 3ft. (915mm), should be placed beneath the pipes. Side support should be placed at 6ft. (1.8m), if the stacks are rectangular. Closer supports will be required for sizes below 160mm. In such pipe racks, pipes may be stored not more than seven layers, or 6ft. (1.8m) high, whichever is the lesser, but if different classes of pipe are kept in the same racks, then the thickest classes of largest diameter must always be placed at the bottom.

Longterm Pipe Storage

Technical Information

UPVC Chemical Resistance Chart

Three different classes of chemical resistance degree are conventionally used in this guide ie:

Class 1: HIGH RESISTANCE (corrosion-proof) - all materials belonging to this class are completely or almost completely corrosion-proof against the conveyed fluid, according to the specified operating conditions.

Class 2: LIMITED RESISTANCE - the materials belonging to this class are partially attacked by the conveyed chemical compound. The average life of the material is therefore shorter, and it is advisable to use a higher safety factor by selecting a higher SN rating pipe.

Class 3: NO RESISTANCE - all material belonging to this class are subject to corrosion by the conveyed fluid and they should therefore not be used.

The absence of any class indication means that no data are available concerning the chemical resistance of the material in respect of the conveyed fluid.

Butterfly Valves

New
Product

Our new butterfly valve for regulating flow, specifically designed for water applications.

- Disk in PVC-U with through shaft
- Zinc plated square section steel stem completely isolated from the fluid complying with standard
- Can also be installed as a bottom discharge valve or tank dump valve
- Valve material compatibility (PVC-U) with swimming pool, water treatment, agriculture irrigation, drinking water and other food substances according to current regulations
- Possibility of directly installing a gearbox or pneumatic and/or electric actuators with a standard drilling pattern according to standard ISO 5211 F05, F07, F10
- Sensitive, angular adjustment for flow regulation
- Option to put security padlock

Technical specifications

Construction	Bi-directional centric butterfly valve
Size range	DN 40 / 200
Nominal pressure	Wafer version DN 40 / 50: PN 16 with water at 20 °C DN 65/200: PN 10 with water at 20 °C
Temperature range	Max 50 °C
Reference standards	Flanging system: EN ISO 1452, EN ISO 15493, DIN 2501, ISO 7005-1, EN 1092-1, ANSI B16.5 Cl.150
Riferimenti reference standards	Construction criteria: EN ISO 16136, EN ISO 1452, EN ISO 15493 Test methods and requirements: ISO 9393 Actuator couplings: ISO 5211
Valve material	Body: PVC-U Disk: PVC-U Handle: ABS Stem: Zinc plated carbon steel (C45). On request STAINLESS steel AISI 316
Seal material	Liner: EPDM, FKM. On request NBR
Control option	Hand lever operated; Gearbox, pneumatic actuator, electric actuator

UPVC Unions & Threaded Fittings

Both Side Female Union**Patented Product****O-Ring from EPDM.**

Models Ø63 - Ø110 mm are designed to be used with ball valve handle.

For corrosive liquids, viton gasket is optional.

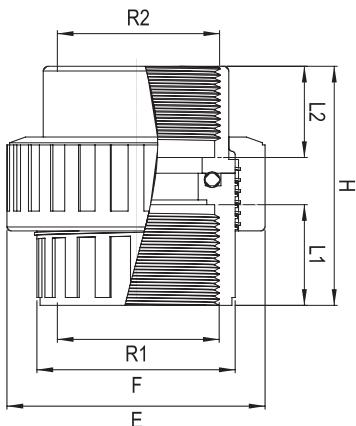

Place the handle to slot and turn the union by handle.

You can use the union without the handle.

UPVC Pipes

UPVC PIPES

UPVC Clean Water Pipes have plane and smooth surface. They can stand atmospheric conditions and pressure. They are suitable for all kinds of liquid transfer because of their high resistance against chemicals. They are produced appropriate for TS 274, EN 1452 and DIN 8062, 19532 norms. Hard UPVC Clean Water Pipes are the most preferred products in drinking water transfer since there are strong, sanitary, easy to install and transport. Our company which gives value to quality, make all necessary tests and analysis frequently for these pipes in laboratories.

“water technology”

Technical Consumables

UPVC Solvent Cements

Industrial grade, high strength UPVC cement for large diameter applications or where more working time is required.

Also recommended for hot weather applications.

Heavy body formulation delivers superior gap filling capacity between pipe & fittings.

For pipe sizes with interference fit through 12" all classes and schedules. For use on non-pressure applications through 18". All pots are with brush applicator. Please ask price for pots without brush.

UPVC pipe and fitting applications : potable water, pressure, non-pressure, conduit, drain, duct, DWV and sewer.

Code	Description	Color	Net Filling	Box	Price
13525	Heavy Duty PVC Solvent Cement	Transparent	1000 ml	12	22,00 €
13523	Heavy Duty PVC Solvent Cement	Transparent	500 ml	12	14,50 €
13522	Heavy Duty PVC Solvent Cement	Transparent	250 ml	24	9,00 €
13521	Heavy Duty PVC Solvent Cement	Transparent	125 ml	-	7,20 €
13530	Gel Solvent Cement for Flexible PVC Pipes	Blue	500 ml	24	13,75 €

APPLICATION

Step 1

Measure the length of the pipe and mark this with a permanent marker.

Step 2

Saw off the pipe at a right angle to the correct length with a PVC saw or use the Cable saw for places that are difficult to reach.

Step 3

Chamfer the end of the pipe ($x=15$) with a chamfering tool. For diameters ≤ 63 mm. This is done to ensure a better distribution of the cement, to prevent scrapping away the cement and to create a locating edge for easier assembly.

Step 4

Deburr the inside of the end of the pipe with the Deburring tool. This ensures that the pipe end is smooth and whole.

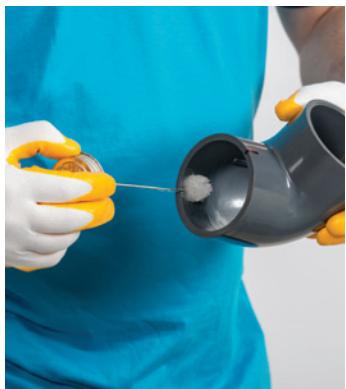

Step 5

Mark the insertion depth (the bonding surface) on the pipe. This is important so that excess adhesive is not applied to the pipe, which can corrode the pipe and weaken the joint.

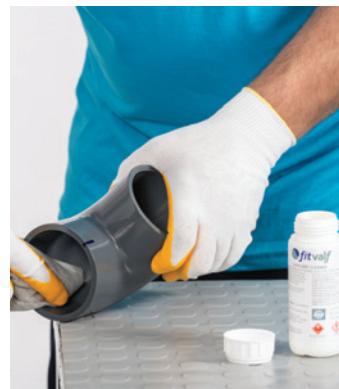

Step 6

Mark the correct assembly position of the fitting. Once the joint is made, it cannot be adjusted.

Step 7

Clean the inside of the fitting with fitvalf Cleaner and the Cleaner Cloth (lint-free cloth). Cleaning ensures a dirt- and grease-free surface and also provides a chemical pretreatment (pre-soak) for a better bonding. Let the parts dry properly to reduce the chance of condensation.

Step 8

Clean the outside of the pipe with Fitvalf Cleaner and the Cleaner Cloth (lint-free cloth).

Step 9

Apply the cement to the fitting using the special brush (integrated in the cap). The brush which is most suitable for the pipe diameter should be used. Apply a thin layer in the fitting and a somewhat thicker layer to the pipe end. Do not use too much of the cement.

Step 10

Apply the cement to the pipe. This sequence (steps 9 & 10) is important because the pipe must otherwise be laid on the (dirty) ground once again.

Step 11

Assemble the joint immediately in a flowing, even movement. For a good joint, an even closed ring of cement is now visible at the transition from the pipe to the fitting.

Step 12

Remove superfluous cement immediately with the Griffon Cleaner Cloth. Superfluous cement can corrode the pipe and thus weaken it.

UPVC Repairing Kit

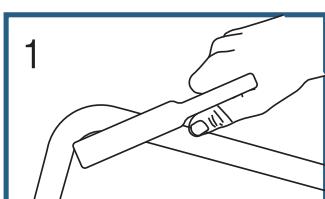

Product Details

Multipurpose repairing epoxy resin for dry and underwater-wet applications.

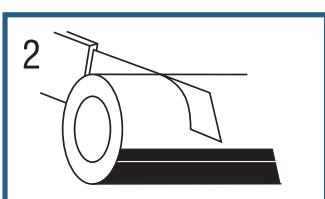

Code	Description	Net Filling	Package	Price
13551	Aquakit	57 gr	1	7,70 €

APPLICATION

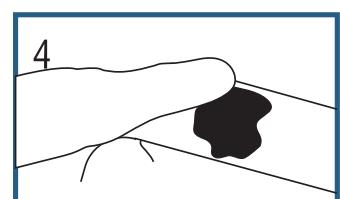

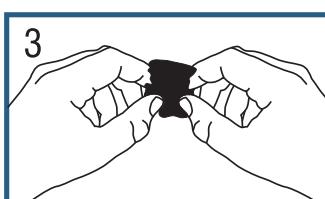

Step 1

Make surface rough with sandpaper or steel brush.

Step 2 - 3

Tear off required quantity and knead it until you get a single colour (± 1 minute)

Step 4

Apply on the required spot.

Pumps

Fitvalf Streamer 2010

Product Details

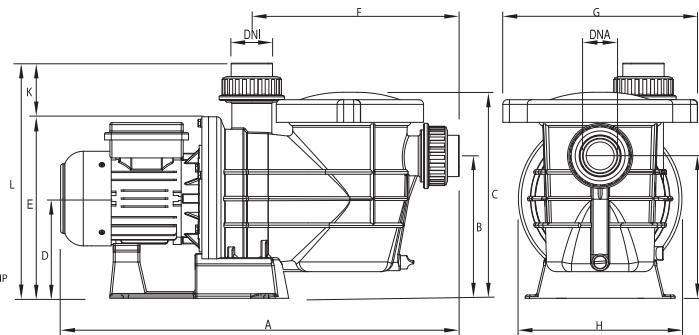

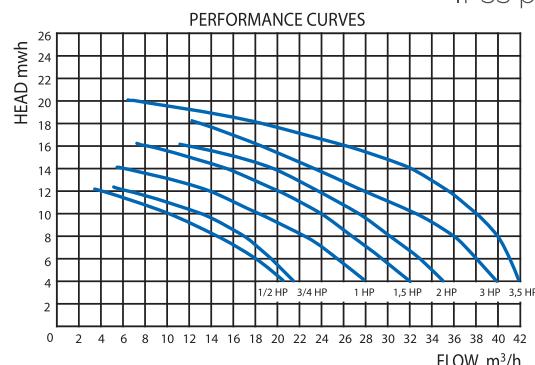

The Streamer Pumps are precision, injection - moulded units, using a temperature and corrosion resistant fibre glass low dense plastic. The difference between Streamer 2010 and other pumps lies in their uncomparable performance.

Characteristics

Monoblock pump body, in 30% fiberglasspolypropylene for protection against corrosive water. Housed inside is a PREFILTERING BASKET in TWO PARTS that has a large filtering surface and is easy to remove and to clean. High quality steel shaft and mechanical seal. Noryl ultrasound soldered impeller.

Motor

IP55 protected. 230V or 230/400V - 50Hz. 2850 rpm.

Fitvalf Pumpex Jet

Product Details

GEMAŞ Pumpex-Jet thermoplastic body countercurrent pump. Ideal for usage with jet nozzles, counter current systems, fountains or similar water attractions.

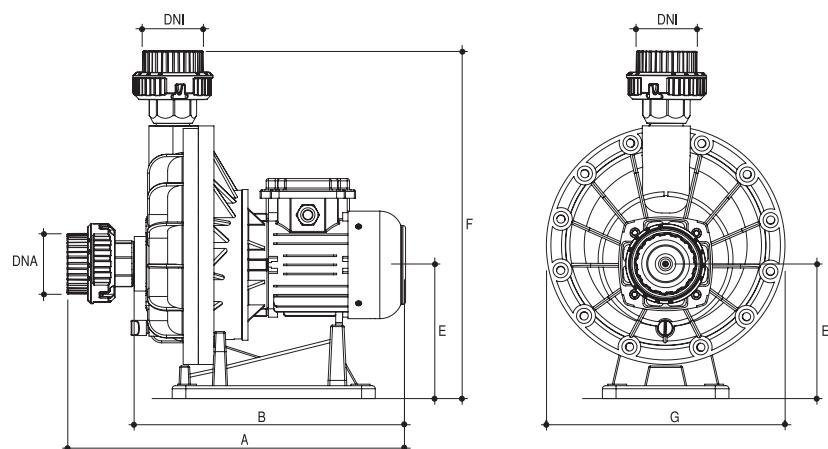

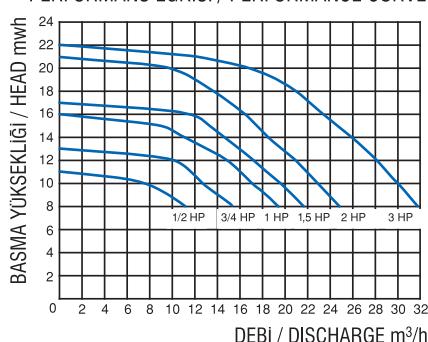

- 2850 rpm – IP55 motor
- Pump shaft in AISI 316 quality stainless steel
- Suction 2", Return 1 1/2" connection. Connections are with unions
- Body made of fiber glass reinforced PP

* This product can be ordered as version "industrial" for corrosive liquid applications.

In such pumps, special mechanical seal and viton o-rings are used.

End Use : Pool Fitting

Sample Receiving Date : January 10, 2011

Testing Period : January 10, 2011~ January 12, 2011

Service Type : NORMAL

Test Requested : Selected test (s) as requested by client.

Test Method : Please refer to next page(s)

Test Result(s) : Please refer to next page(s)

Conclusion : Based on the performed tests on submitted samples, the result **complies with the RoHS Directive 2002/95/EC and its subsequent amendments.**

The test results relate only to the items tested only. The report shall not be reproduced except in full, without the written approval of the laboratory. Test reports without SGS seal and unauthorized person signature are invalid. The reported uncertainty is based on a standard uncertainty multiplied by a coverage factor k=2, providing a level of confidence of approximately 95% the uncertainty evaluation has been carried out in accordance with UKAS/ISO 17025 requirements. This results do not include uncertainties. Opinions and interpretations expressed herein are outside of the scope of UKAS Accreditation. Tests marked (*) in this Test Report are not included in the UKAS Accreditation Schedule for this Laboratory.
